

Six Steps To Ironing Out The WRINKLES

2 Cuffs and Sleeves

Spray and iron cuff on wrong side for DIRTGARD® protection. (Spray starch helps protect fabric from soil, stain and wear.) Spray cuff on right side and iron, smoothing out any creases or puckers. Lay sleeve flat on ironing board along bottom of sleeve seam. Spray entire sleeve and iron. Turn sleeve over, spray again and iron as you smooth out any unwanted creases. Repeat procedure for other cuff and sleeve.

1 Collar

Spray starch entire collar and iron, smoothing out puckers as you iron. To avoid creasing, iron both ends and move toward center of collar.

3 Yoke

Place shoulder portion of shirt over the narrow end of ironing board. Smooth flat, spray and iron. Repeat procedure for other shoulder.

4 Placket

Spray and iron on reverse side of placket (button and button hole areas) to smooth facing fabric. Turn shirt over and spray and iron placket area being careful to iron around the buttons. (Ironing over the buttons could scratch the soleplate of the iron or melt the buttons.)

5 Shirt Body

Holding the shirt toward you, place one side of shirt front on ironing board with shoulder portion over the narrow end of the board. Smooth flat, spray and iron. Move shirt away from you to the next section to be ironed. Continue procedure until shirt is completely ironed.

6 Review

Inspect results and touch up any areas you may have missed. Place on hanger and admire your work. Notice how your shirt looks and feels like new!
